### BROKEN VEIN

The removal of unsightly thread veins and blemishes on the face and legs has never been easier with our high-power diode laser. Sometimes known as spider or broken veins, thread veins are small prominent veins that appear just below your skin surface, commonly on your face and legs. They tend to branch and give a spidery sort of pattern hence their common name.

Using our medical laser the blood in the vessel is heated, causing mild inflammation and causing the closure of the vessel. We suggest at least 3 treatments, performed every weeks. A full Consultation and test patch will be required before beginning treatment.
